Independent practice

Reassign a draft course | Due before Session 04

Business requirement

The training administrator needs to reassign the draft course to an existing instructor while revising its fee and availability. Existing enrollments must remain consistent.

Your task

After completing TODOs 01-04, extend activity 2 in the same Program.cs. Keep your completed work and the supplied error handlers.

1. Update InstructorId as well as Fee and IsActive. Add a typed **@instructorId** parameter using **SqlDbType.Int**. Use instructor 12 for the successful test.
2. Validate a positive instructor ID before opening the connection. Keep a parameterized WHERE CourseId = @courseId and a short await using scope.
3. Use course 190. If it was deleted, recreate it with activity 1. Test course IDs 190, 99 and abc. Then try instructor 99 to observe a foreign-key failure.
4. Display an appropriate success, no-match or error message. Do not remove the database constraint to make an invalid change succeed.

Code Lab Submission

Submit one **Program.cs** through the instructor's Google Classroom activity **before Session 04**. Include your name, completed TODOs, the extended update and the exception handlers. Add comments explaining each new parameter's name, SQL type and value, and why a missing course differs from a constraint failure.

Before you submit

- [ ] I tested a successful change, a missing course, invalid input and an invalid instructor reference.
- [ ] I can distinguish an affected-row count of 0 from an exception.
- [ ] I can explain database NULL, the matching reader getters and resource disposal.
